Tech & Learning magazine has named the winners of the **Awards of Excellence: Best of 2021** contest, which recognizes educational technology that exceptionally supported teachers and students last year.

The contest focused on outstanding products that supported education this past year no matter the learning environment, whether face-to-face, remote, or anything in between. Eligible products included hardware, software, curriculum, and more, all divided by grade levels to make it easier to find the solutions you need.

Each nominee answered the following questions: What specific problem does this product solve? How did your product exceptionally support teaching and learning in 2021? How does your product address the challenges facing education today?

Tech & Learning's panel of educators evaluated the nominations based on a set of criteria that included: the product's ability to support different learning environments and student needs; value; versatility; and ease of use.

“2021 was another challenging year for schools, so it was inspiring to see both educators and the industry continue to come up with new solutions to support teaching and learning,” says Tech & Learning Content Director Christine Weiser. “Our judges were impressed with the creativity presented by our **Best of 2021** nominees, many of whom found new and innovative ways to use technology to ensure students continue to get an equitable education in any learning environment.”

The complete listings will be featured in the February 2022 issue of Tech & Learning magazine. Please join us in congratulating the following winners of the **Awards of Excellence: Best of 2021**.
