**NEC DISPLAY'S E705-DNT WITH DISPLAYNOTE SOFTWARE DRIVES  
COLLABORATION**

***70-Inch Conference Room/Digital White Board Boasts Integrated 12-Point  
Touch System; DisplayNote License for up to 20 Users Included***

**CHICAGO – December 8, 2015** – [NEC Display Solutions of America](#), a leading provider of commercial LCD display and projector solutions, today announced the MultiSync® E705-DNT display with DisplayNote Software, enabling white board functionality combined with collaboration for up to 19 mobile devices and a presenter at the same time.

The 70-inch E705 display delivers high-level imagery for conference rooms, classrooms, corporate huddle rooms as well as digital signage. It ships with [NEC DisplayNote Software](#), an app that lets leaders and participants present, share and annotate content from a multitude of devices, including PCs, tablets and smart phones. Participants can take notes and automatically save them for review. Up to 19 separate smart devices, besides the presenter's, can be connected to the display at one time.

As a result of the partnership with TouchSystems, NEC Display is able to provide a commercial grade display with robust digital video connectivity capable of 12-point touch.

“Collaboration is the key attribute of the E705-DNT, as people can share knowledge, annotate and pass control to participants with this display,” said Keith Yanke, Senior Director of Product Marketing for Large Screen Displays and Projectors at NEC Display.

“While competitive offerings limit the types of devices that can connect to the master display, the NEC E705-DNT enables any smart device to participate.”

“TouchSystems is committed to enhancing collaboration, be it in the classroom or workforce,” said Carol Nordin, President of TouchSystems, a pioneer in display enhancement technologies. “Our partnership with NEC Display delivers the solutions required to improve productivity and help organizations realize their objectives.”

The E705-DNT includes an OPS (Open Pluggable Specification) option slot for future proof expandability, allowing PCs, a tuner module, an HDBaseT receiver, and other options to integrate directly into the display, simplifying installations and reducing the points of failure. In addition, full bidirectional RS-232 and LAN control allow for unabridged communication capability and full compatibility with new or legacy control systems.

A full scheduler feature and commercial-grade thermostatic cooling capabilities also allow the E705 to fit perfectly within educational institutions and digital signage applications where these types of features are necessary.

Among the other features of the MultiSync E705-DNT display:

- Full-metal chassis and commercial-grade panel with LED backlighting, which give organizations eco-friendly, durable displays
- Internal 10W speakers and carrying handles, lowering the necessary components for certain projects and simplifying overall installation
- Comprehensive input panel, including (2) HDMI, DisplayPort, DVI and VGA connections to accommodate a multitude of laptop brands offering extensive flexibility for presenters
- Infrared sensor and button lock options to bolster security
- ECO Mode, which cuts power consumption to help users lower their overall total cost of ownership
- Custom input detect and auto start-up options, which give users flexibility with source recognition

The MultiSync [E705-DNT](#) ships with a 3-year limited parts and labor warranty, and will be available in December 2015 at a minimum advertise price of \$5,399.
