Sharp Rolls Out Three New MultiSync® PN-ME Large Screen Displays for its Innovative ME Series Lineup

New larger displays deliver high-quality content with flexibility for a variety of environments

MONTVALE, NJ – August 19, 2025 – Your large screen display options just got larger. [Sharp Imaging and Information Company of America](#) (SIICA), a division of Sharp Electronics Corporation (SEC), today announced three new, innovative MultiSync® PN-ME2 displays, complementing the [ME Series display lineup](#) launched in early 2024. These cutting-edge displays come in three sizes: 75" Class PN-ME752 (74 ½-inch diagonal), 86" Class PN-ME862 (85 6/10-inch diagonal) and 98" Class PN-ME982 (97 ½-inch diagonal). They are essential tools for presenting in corporate or educational environments, as well as showcasing advertising or entertaining content to your viewers.

The new, larger-sized PN-ME2 displays bring a reliable, high-end visual experience when content matters most, with 450 nits of brightness to keep viewers engaged. These models have anti-reflective, high haze panels along with a new, slimmer mechanical design that provides up to an 18% decrease in depth from previous models, allowing fit in any environments. The displays' robust metal build and high-end electronics align with MultiSync's 40-year reputation for high quality solutions. Their ease-of-use and versatility make the PN-ME displays a great fit for customers who want to showcase their content in either landscape or portrait orientation. Furthermore, their durability ensures excellent performance for years and they are backed by Sharp's industry-leading 3-year limited commercial warranty along with best-in-class service and support.

"We're thrilled to launch the MultiSync PN-ME displays and bring customers larger, cost-conscious solutions to incorporate in a variety of spaces from the classroom to the boardroom," said Benjamin Hardy, Senior Product Manager, SIICA. "Their advanced features, usability and flexible design complement the everchanging needs of organizations in today's tech-forward workplace."

Ideal for tech-driven environments, the PN-ME displays feature an integrated USB-C connection for all your audio/visual needs, including a DisplayPort Alt Mode and upstream capabilities via an integrated USB Hub. This allows for separate peripheral control, such as a video camera, via a connected source through a USB downstream connection for a seamless audio, video and data experience. The units are also based off System-On-Chip (SOC) architecture for greater flexibility in content deployment as well as including an integrated browser with gigabyte speeds for internet.

The MultiSync PN-ME displays have 32GB of storage (total capacity including operating system) to house content within the product itself. The displays include an 18/7 runtime, an advanced media player to schedule content and the capability to set up to seven different schedules to power the display on or off and to define a source for independent operation. In addition, its Energy Star 8.0 certification makes the PN-ME display an ideal choice for businesses that are conscious of their environmental footprint.
