**NEC DISPLAY'S NP-PX1004UL PROJECTOR AND dvLED LX SERIES
DISPLAYS WIN WFX AWARDS FOR BEST NEW PRODUCTS OF 2017**

***Worship Facilities magazine names NEC Display's versatile projector and
direct-view LED displays two of the best products for house of worship***

CHICAGO – October 11, 2017 – [NEC Display Solutions of America](#), a leading provider of commercial display and projector solutions, announced today that it took home *Worship Facilities'* 2017 new product awards in the categories of flat-panel display and projector. The announcement was made at [WFX 2017](#), the house of worship technology tradeshow taking place in Dallas through Wednesday, Oct. 12.

In the flat-panel display category, NEC Display's [Direct View LED](#) LX Displays was the sole standout product for 2017. The dvLED LX Series' feature set makes it ideal for house of worship applications, including high visibility with flexible viewing distances and angles and low reflectance, vivid color and contrast, and a 100,000-hour lifespan.

"The dvLED LX Series is the most flexible LED display solution on the market," said Keith Yanke, senior director of product marketing at NEC Display. "Our installation partners love it because of how easy it is to work with and configure, and customers love it for its low total cost of ownership because of its low maintenance."

In the projector category, the [NP-PX1004UL](#) laser/phosphor projector took a place as one among the top stand out products of the year. The NP-PX1004UL offers 10,000

lumens of full brightness over 20,000 hours of virtually maintenance-free operation, thanks in part to its one-of-a-kind sealed optical engine that keeps dust out.

In addition to its robust construction, the NP-PX1004UL features an OPS option slot that that can accept a variety of content devices. This provides an easy way for house of worship directors to customize content for each week's service without worrying about additional hardware.

"The NP-PX1004UL offers some of the most innovative and versatile applications for houses of worship," said Rich McPherson, senior product manager at NEC Display. "With projectors, you can manipulate the image in simple ways like rotation, or in complex ways like edge-blending or projection mapping. The latter lets images be projected into corners and onto 3D objects, making presentations quite unique."

Both the NP-PX1004UL and the dvLED LX Series displays are available now. For more information and pricing, contact your NEC Display representative or visit
